

WE PERFORM SAP LOGISTICS

SAP EWM X AUTOSTORE

HIGHEST PERFORMANCE WITH AUTOSTORE® AND SAP

Connect and control your AutoStore® system directly with your SAP EWM. This direct system and process integration gives you complete control and transparency over your processes in real time.

THE MODERN SMALL PARTS WAREHOUSE

AutoStore offers a powerful, flexible and quickly scalable solution for storing and picking small parts. Thanks to the SWAN AutoStore EWM integration, the system can be fully integrated into your existing SAP EWM and is ready for use in just a few days.

CONTROLLING OUT OF YOUR SAP EWM

All warehouse and picking processes are controlled from your SAP system. This direct integration gives you complete real-time transparency and control over your warehouse processes. At the same time, the system is operated via a central interface.

INTUITIVE USER INTERFACE

A key element of the SWAN SAP EWM AutoStore integration are modern UI5-based dialogs that are intuitive to use and easy to learn. The clearly structured interfaces increase transparency, save time during familiarization and in day-to-day use and fit seamlessly into your existing SAP EWM solution.

READY-MADE AND INDIVIDUAL PROCESSES AND DIALOGS

SWAN provides ready-to-use best-practice processes for putaway, order picking and legally compliant inventory procedures. In addition to our „ready-to-use“ dashboards for SAP EWM processes, we also develop individual interfaces and evaluations for you to meet specific customer requirements.

FEATURES*

STANDARDIZED DIALOGS

- Storage
- Removal from storage
- Inspection
- Inventory
- Container management

CONTINUOUS EXPANDABILITY

- Realization and implementation of customer-specific adaptations, processes and dialogs
- Provision of a data interface for the creation of individual dialogs

SAP UI5 USER INTERFACE

The processes are mapped using standardized SAP UI5 dialogs in the familiar Fiori design, enabling intuitive operation of the user interface and fast processing of tasks.

FAST COMMISSIONING

The SWAN solution offers ready-made automatic integration solutions to your AutoStore system for many SAP processes and thus enables fast commissioning without additional middleware.

RISK-FREE IMPLEMENTATION

We integrate AutoStore by importing our SAP software package with low risk and adapted to your business processes in just a few days. SAP EWM customizing according to your requirements is included.

AUTOMATED CONTROL

Greater system efficiency thanks to automated and optimized control of the AutoStore system with all detailed information from your SAP system.

*System requirements: SAP EWM Basic and Advance
