

WE PERFORM SAP LOGISTICS

SAP EWM

BASIC | ADVANCED

SAP EXTENDED WAREHOUSE MANAGEMENT

SAP EWM is a powerful warehouse management system that ensures the efficiency of your logistics and warehouse management processes. It offers numerous integration options in your SAP landscape, for example through multi-client use with various ERP systems. The system is flexible, highly customizable and offers the possibility to create tailor-made solutions for your warehouse management.

HIGH-PERFORMANCE SAP EWM CONFIGURATION WITH SWAN

Thanks to the numerous configuration options, SAP EWM is the ideal warehouse management system for demanding logistics scenarios. However, it is precisely this diversity that poses a challenge during implementation. As an experienced implementation partner, we ensure that the configuration of your SAP EWM is tailored to your needs. To do this, we rely on a methodically sound approach.

TRANSFORMATION TO SAP EWM S/4 HANA

Prepare for the future of logistics 4.0 - with a migration to SAP EWM S/4HANA, you can benefit today from the solutions you will need tomorrow.

Switching to the S/4HANA platform offers your logistics future-oriented opportunities, for example thanks to the faster data processing times of the in-memory database. Use the associated real-time insights and analyses to set up your business processes for the logistics requirements of tomorrow. Integrate modern technologies such as artificial intelligence, machine learning and IoT applications. And benefit from the newly created usability on stationary and mobile devices.

We also support you with the migration of your existing SAP EWM system to SAP EWM S/4HANA.

OUR SERVICE PORTFOLIO

ANALYSIS & CONSULTING

We advise you on new implementation projects and upgrades to existing applications. Based on our many years of expertise, we evaluate the most suitable solution based on your needs and processes in order to make your warehouse processes more efficient.

MIGRATION & UPGRADE

We have outstanding expertise in the field of software migration. We therefore offer customized and professional solutions for a smooth changeover - regardless of whether it is an upgrade, a retrofit or the replacement of legacy systems.

TECHNICAL INTEGRATION

The connection of various automated systems enables the targeted monitoring and control of material flows within your warehouse. We implement solutions to control warehouse and conveyor technology in real time from SAP EWM, with or without middleware.

PROJECT METHODOLOGY

We combine various agile project management methodologies. This hybrid approach allows us to adapt flexibly to customer requirements and offers planning security. As a result, we create transparency, flexibility and efficiency.

24/7 SUPPORT

Our Customer Lifecycle Service team is available to you 24/7 in German and English, even after project completion. Our automated escalation process tracks and coordinates tickets in accordance with your SLAs.

TRAINING & ENABLEMENT

We offer customized training for users and administrators in the form of in-house training, (individual) coaching and online workshops. This portfolio is supplemented by operational and control center support for running applications.
